Mathematics NCERT Grade 6, Chapter 14: **Practical Geometry**- It covers all the fundamentals of **drawing various shapes (geometrical shapes)**.

The chapter begins by discussing about different **geometrical tools** and their **uses**.

Mathematical instruments used to construct shapes:

- **A Graduated Ruler**
- **The Compasses**
- **The Divider**
- **Set-Squares**
- **The Protractor**

The constructions in this chapter will be using **ruler and compasses**. The first shape that chapter talks about is **Circle**. Students will learn how to draw a circle when its radius is known.

Subsequently, the focus is given on the concepts of

- **Constructing a line Segment**
 - **Construction of a line segment of given length**
 - **Constructing a copy of the given line segment**
- **Constructing a perpendicular**
 - **When a point lies on the line**
 - **When the point is not on it**

These constructions are done through paper folding, set-squares and through ruler, compasses. Once these topics are well understood, the next topic is to learn how to draw a **perpendicular bisector of a line segment**.

This is followed by the construction of **Angles**. Just in a similar way as construction of line segment and perpendiculars, the construction of angles include the following topics:

- **Constructing an angle of a given measure.**
- **Constructing a copy of an angle**
- **Constructing the bisector of a given angle**
- **Constructing angles of special measures such as 90° , 45° , 60° , 30° , 120° , 135° .**

All the constructions given in this chapter are explained in a step wise manner. Students must go through and understand the steps and follow the same procedure in exams as well. A short overview of the chapter is given at the end for quick revision.

Question 1:

Draw a circle of radius 3.2 cm.

ANSWER:

The required circle can be drawn as follows.

UNIQUE STUDY POINT

CLASS VI: MATHEMATICS NCERT SOLUTIONS

[CLICK HERE FOR YOUTUBE VIDEOS](#)

[CLICK HERE TO JOIN WHATSAPP GROUP](#)

Step 1

First, open the compasses for the required radius 3.2 cm.

Step 2

Mark a point 'O' where we want the centre of the circle to be.

Step 3

Place the pointer of compasses on O.

Step 4

Turn the compasses slowly to draw the circle.

Page No 276:

Question 2:

With the same centre O, draw two circles of radii 4 cm and 2.5 cm.

ANSWER:

The required circle can be drawn as follows.

Step 1

First, open the compasses for the required radius 4 cm.

Step 2

Mark a point 'O' where we want the centre of the circle to be.

Step 3

Place the pointer of compasses on O.

Step 4

Turn the compasses slowly to draw the circle.

Step 5

Now, open the compasses for 2.5 cm.

[CLICK HERE FOR YOUTUBE VIDEOS](#)

[CLICK HERE TO JOIN WHATSAPP GROUP](#)

Step 6

Again put the pointer of the compasses on point 'O' and turn the compasses slowly to draw the circle.

Page No 276:

Question 3:

Draw a circle and any two of its diameters. If you join the ends of these diameters, what is the figure obtained? What figure is obtained if the diameters are perpendicular to each other? How do you check your answer?

ANSWER:

A circle can be drawn of any convenient radius, also having its centre as O. Let AB and CD be two diameters of this circle. When we join the ends of these diameters, a quadrilateral ACBD is formed.

As we know that the diameters of a circle are equal in length, therefore, the quadrilateral so formed will have its diagonals of equal length.

Also, $OA = OB = OC = OD = \text{radius } r$ and if a quadrilateral has its diagonals of same length which are bisecting each other, then it will be a rectangle.

Let DE and FG be two diameters of this circle such that these are perpendicular to each other. A quadrilateral is formed by joining the ends of these diameters.

Here, $OD = OE = OF = OG = \text{radius } r$

[CLICK HERE TO JOIN WHATSAPP GROUP](#)

In this quadrilateral DFEG, the diagonals are equal and perpendicular to each other. Also, since these are bisecting each other, it will be a square.

The length of the sides of the quadrilateral so formed can be measured to check our answers.

Page No 276:

Question 4:

Draw any circle and mark points A, B and C such that

(a) A is on the circle. (b) B is in the interior of the circle.

(c) C is in the exterior of the circle.

ANSWER:

A circle and three required points A, B, C can be drawn as follows.

Page No 276:

Question 5:

Let A, B be the centres of two circles of equal radii; draw them so that each one of them passes through the centre of the other. Let them intersect at C and D.

Examine whether \overline{AB} and \overline{CD} are at right angles.

ANSWER:

Let us draw two circles of same radius which are passing through the centres of the other circle.

Here, point A and B are the centres of these circles and these circles are intersecting each other at point C and D.

[CLICK HERE FOR YOUTUBE VIDEOS](#)

[CLICK HERE TO JOIN WHATSAPP GROUP](#)

In quadrilateral ADBC,

$AD = AC$ (Radius of circle centered at A)

$BC = BD$ (Radius of circle centered at B)

As radius of both circles are equal, therefore, $AD = AC = BC = BD$

Hence, $\square ADBC$ is a rhombus and in a rhombus, the diagonals bisect each other at 90° . Hence, \overline{AB} and \overline{CD} are at right angles.

Page No 278:

Question 1:

Draw a line segment of length 7.3 cm using a ruler.

ANSWER:

A line segment of length 7.3 cm can be drawn using a ruler as follows.

- (1) Mark a point A on the sheet.
- (2) Put 0 mark of ruler at point A.
- (3) Mark a point B on the sheet at 7.3 cm on ruler.

- (4) Join A and B.

\overline{AB} is the required line segment.

Page No 278:

Question 2:

Construct a line segment of length 5.6 cm using ruler and compasses.

ANSWER:

A line segment of length 5.6 cm can be drawn using a ruler and compasses as follows.

- (1) Draw a line l and mark a point A on this line.

UNIQUE STUDY POINT

[CLICK HERE FOR YOUTUBE VIDEOS](#)

[CLICK HERE TO JOIN WHATSAPP GROUP](#)

(2) Place the compasses on the zero mark of the ruler. Open it to place the pencil up to the 5.6 cm mark.

(3) Place the pointer of compasses on point A and draw an arc to cut l at B. AB is the line segment of 5.6 cm length.

Page No 278:

Question 3:

Construct \overline{AB} of length 7.8 cm. From this, cut off \overline{AC} of length 4.7 cm. Measure \overline{BC} .

ANSWER:

(1) Draw a line l and mark a point A on it.

(2) By adjusting the compasses up to 7.8 cm, draw an arc to cut l on B, while putting the pointer of compasses on point A.

\overline{AB} is the line segment of 7.8 cm.

(3) By adjusting the compasses up to 4.7 cm, draw an arc to cut l on C, while putting the pointer of compasses on point A. \overline{AC} is the line segment of 4.7 cm.

(4) Now, put the ruler along with this line such that 0 mark of the ruler will match with point C.

On reading the position of point B, it comes to 3.1 cm. \overline{BC} is 3.1 cm.

Page No 278:

Question 4:

[CLICK HERE TO JOIN WHATSAPP GROUP](#)

Given \overline{AB} of length 3.9 cm, construct \overline{PQ} such that the length of \overline{PQ} is twice that of \overline{AB} . Verify by measurement.

(Hint: construct \overline{PX} such that length of $\overline{PX} = \text{length of } \overline{AB}$; then cut off \overline{XQ} such that \overline{XQ} also has the length of \overline{AB} .)

ANSWER:

A line segment \overline{PQ} can be drawn such that the length of \overline{PQ} is twice that of \overline{AB} as follows.

(1) Draw a line l and mark a point P on it and let AB be the given line segment of 3.9 cm.

(2) By adjusting the compasses up to the length of AB, draw an arc to cut the line at X, while taking the pointer of compasses at point P.

(3) Again put the pointer on point X and draw an arc to cut line l again at Q.

\overline{PQ} is the required line segment. By ruler, the length of \overline{PQ} can be measured which comes to 7.8 cm.

Page No 278:

Question 5:

Given \overline{AB} of length 7.3 cm and \overline{CD} of length 3.4 cm, construct a line segment \overline{XY} such that the length of \overline{XY} is equal to the difference between the lengths of \overline{AB} and \overline{CD} . Verify by measurement.

ANSWER:

(1) Given that, $\overline{AB} = 7.3$ cm and $\overline{CD} = 3.4$ cm

Question 1:

Draw $\angle POQ$ of measure 75° and find its line of symmetry.

ANSWER:

The below given steps will be followed to construct an angle of 75° and its line of symmetry.

- (1) Draw a line l and mark two points O and Q on it, as shown in the figure. Draw an arc of convenient radius, while taking point O as centre. Let it intersect line l at R .
- (2) Taking R as centre and with the same radius as before, draw an arc intersecting the previously drawn arc at S .
- (3) Taking S as centre and with the same radius as before, draw an arc intersecting the arc at T (see figure).
- (4) Taking S and T as centre, draw an arc of same radius to intersect each other at U .
- (5) Join OU . Let it intersect the arc at V . Now, taking S and V as centres, draw arcs with radius more than $\frac{1}{2}SV$. Let those intersect each other at P . Join OP , which is the ray making 75° with the line l .
- (6) Let this ray be intersecting our major arc at point W . Now, taking R and W as centres, draw arcs with radius more than $\frac{1}{2}RW$ in the interior of angle of 75° . Let these be intersecting each other at X . Join OX .
 OX is the line of symmetry for $\angle POQ = 75^\circ$.

Page No 291:

Question 2:

Draw an angle of measure 147° and construct its bisector.

ANSWER:

The below given steps will be followed to construct an angle of 147° measure and its bisector.

- (1) Draw a line l and mark a point O on it. Place the centre of the protractor at point O and the zero edge along line l .

Question 4:

Draw an angle of measure 153° and divide it into four equal parts.

ANSWER:

The below given steps will be followed to construct an angle of 153° measure and its bisector.

(1) Draw a line l and mark a point O on it. Place the centre of the protractor at point O and the zero edge along line l .

(2) Mark a point A at 153° . Join OA . OA is the required ray making 153° with line l .

(3) Draw an arc of convenient radius, while taking point O as centre. Let it intersect both rays of angle 153° at point A and B .

(4) Taking A and B as centres, draw arcs of radius more than $\frac{1}{2} AB$ in the interior of angle of 153° . Let those intersect each other at C . Join OC .

(5) Let OC intersect the major arc at point D . Now, with radius more than $\frac{1}{2} AD$, draw arcs while taking A and D as centres, and D and B as centres. Let these be intersecting each other at point E and F respectively. Join OE , OF .

OF , OC , OE are the rays dividing 153° angle in 4 equal parts.

Construct with ruler and compasses, angles of following measures:

(a) 60° (b) 30° (c) 90°

(d) 120° (e) 45° (f) 135°

ANSWER:

(a) 60°

The below given steps will be followed to construct an angle of 60° .

(1) Draw a line l and mark a point P on it. Now, taking P as centre and with a convenient radius, draw an arc of a circle which intersects line l at Q .

(2) Taking Q as centre and with the same radius as before, draw an arc intersecting the previously drawn arc at point R .

(3) Join PR which is the required ray making 60° with line l .

(b) 30°

The below given steps will be followed to construct an angle of 30° .

(1) Draw a line l and mark a point P on it. Now taking P as centre and with convenient radius, draw an arc of a circle which intersects line l at Q .

(2) Taking Q as centre and with the same radius as before, draw an arc intersecting the previously drawn arc at point R .

(3) Now, taking Q and R as centre and with radius more than $\frac{1}{2} RQ$, draw arcs to intersect each other at S . Join PS which is the required ray making 30° with line l .

(c) 90°

The below given steps will be followed to construct an angle of 90° .

- (1) Draw a line l and mark a point P on it. Now taking P as centre and with a convenient radius, draw an arc of a circle which intersects line l at Q .
- (2) Taking Q as centre and with the same radius as before, draw an arc intersecting the previously drawn arc at R .
- (3) Taking R as centre and with the same radius as before, draw an arc intersecting the arc at S (see figure).
- (4) Taking R and S as centre, draw an arc of same radius to intersect each other at T .
- (5) Join PT , which is the required ray making 90° with line l .

(d) 120°

The below given steps will be followed to construct an angle of 120° .

- (1) Draw a line l and mark a point P on it. Now taking P as centre and with a convenient radius, draw an arc of a circle which intersects line l at Q .
- (2) Taking Q as centre and with the same radius as before, draw an arc intersecting the previously drawn arc at R .
- (3) Taking R as centre and with the same radius as before, draw an arc intersecting the arc at S (see figure).
- (4) Join PS , which is the required ray making 120° with line l .

(e) 45°

The below given steps will be followed to construct an angle of 45° .

- (1) Draw a line l and mark a point P on it. Now taking P as centre and with a convenient radius, draw an arc of a circle which intersects line l at Q .
 - (2) Taking Q as centre and with the same radius as before, draw an arc intersecting the previously drawn arc at R .
 - (3) Taking R as centre and with the same radius as before, draw an arc intersecting the arc at S (see figure).
 - (4) Taking R and S as centres, draw arcs of same radius to intersect each other at T .
 - (5) Join PT . Let it intersect the major arc at point U .
 - (6) Taking Q and U as centres, draw arcs with radius more than $\frac{1}{2} QU$ to intersect each other at V . Join PV .
- PV is the required ray making 45° with the given line l .

(f) 135°

The below given steps will be followed to construct an angle of 135° .

- (1) Draw a line l and mark a point P on it. Now taking P as centre and with a convenient radius, draw a semi-circle which intersects line l at Q and R .
- (2) Taking R as centre and with the same radius as before, draw an arc intersecting the previously drawn arc at S .
- (3) Taking S as centre and with the same radius as before, draw an arc intersecting the arc at T (see figure).
- (4) Taking S and T as centre, draw arcs of same radius to intersect each other at U .
- (5) Join PU . Let it intersect the arc at V . Now taking Q and V as centres and with radius more than $\frac{1}{2} QV$, draw arcs to intersect each other at W .
- (6) Join PW which is the required ray making 135° with line l .

Question 6:

Draw an angle of measure 45° and bisect it.

ANSWER:

The below given steps will be followed to construct an angle of 45° and its bisector.

(1) $\angle POQ$ of 45° measure can be formed on a line l by using the protractor.

(2) Draw an arc of a convenient radius, while taking point O as centre. Let it intersect both rays of angle 45° at point A and B .

(3) Taking A and B as centres, draw arcs of radius more than $\frac{1}{2} AB$ in the interior of angle of 45° . Let those intersect each other at C . Join OC .

OC is the required bisector of 45° angle.

Page No 291:

Question 7:

Draw an angle of measure 135° and bisect it.

ANSWER:

The below given steps will be followed to construct an angle of 135° and its bisector.

(1) $\angle POQ$ of 135° measure can be formed on a line l by using the protractor.

(2) Draw an arc of a convenient radius, while taking point O as centre. Let it intersect both rays of angle 135° at point A and B .

(3) Taking A and B as centres, draw arcs of radius more than $\frac{1}{2} AB$ in the interior of angle of 135° . Let those intersect each other at C . Join OC .

OC is the required bisector of 135° angle.

Page No 291:

Question 8:

Draw an angle of 70° . Make a copy of it using only a straight edge and compasses.

ANSWER:

The below given steps will be followed to construct an angle of 70° measure and its copy.

(1) Draw a line l and mark a point O on it. Place the centre of the protractor at point O and the zero edge along line l .

(2) Mark a point A at 70° . Join OA . OA is the ray making 70° with line l . Draw an arc of convenient radius in the interior of 70° angle, while taking point O as centre. Let it intersect both rays of angle 70° at point B and C .

(3) Draw a line m and mark a point P on it. With the same radius as used before, again draw an arc while taking point P as centre. Let it cut the line m at point D .

(4) Now, adjust the compasses up to the length of BC . With this radius, draw an arc while taking D as centre, which will intersect the previously drawn arc at point E .

(5) Join PE . PE is the required ray which makes the same angle (i.e. 70°) with line m .

Question 9:

Draw an angle of 40° . Copy its supplementary angle.

ANSWER:

The below given steps will be followed to construct an angle of 40° measure and the copy of its supplementary angle.

- (1) Draw a line segment \overline{PQ} and mark a point O on it. Place the centre of the protractor at point O and the zero edge along line segment \overline{PQ} .
- (2) Mark a point A at 40° . Join OA. OA is the required ray making 40° with \overline{PQ} . $\angle POA$ is the supplementary angle of 40° .
- (3) Draw an arc of convenient radius in the interior of $\angle POA$, while taking point O as centre. Let it intersect both rays of $\angle POA$ at point B and C.
- (4) Draw a line m and mark a point S on it. With the same radius as used before, again draw an arc while taking point S as centre. Let it cut the line m at point T.
- (5) Now, adjust the compasses up to the length of BC. With this radius, draw an arc while taking T as centre, which will intersect the previously drawn arc at point R.
- (6) Join RS. RS is the required ray which makes the same angle with line m , as the supplementary of 40° is 140° .
