Sum of the digits at even places = $4 + 5 = 9$

Difference = $9 - 9 = 0$

As the difference between the sum of the digits at odd places and the sum of the digits at even places is 0, therefore, 5445 is divisible by 11.

(b) 10824

Sum of the digits at odd places = $4 + 8 + 1 = 13$

Sum of the digits at even places = $2 + 0 = 2$

Difference = $13 - 2 = 11$

The difference between the sum of the digits at odd places and the sum of the digits at even places is 11, which is divisible by 11. Therefore, 10824 is divisible by 11.

(c) 7138965

Sum of the digits at odd places = $5 + 9 + 3 + 7 = 24$

Sum of the digits at even places = $6 + 8 + 1 = 15$

Difference = $24 - 15 = 9$

The difference between the sum of the digits at odd places and the sum of digits at even places is 9, which is not divisible by 11. Therefore, 7138965 is not divisible by 11.

(d) 70169308

Sum of the digits at odd places = $8 + 3 + 6 + 0 = 17$

Sum of the digits at even places = $0 + 9 + 1 + 7 = 17$

Difference = $17 - 17 = 0$

As the difference between the sum of the digits at odd places and the sum of the digits at even places is 0, therefore, 70169308 is divisible by 11.

(e) 10000001

Sum of the digits at odd places = 1

Sum of the digits at even places = 1

Difference = $1 - 1 = 0$

As the difference between the sum of the digits at odd places and the sum of the digits at even places is 0, therefore, 10000001 is divisible by 11.

(f) 901153

Sum of the digits at odd places = $3 + 1 + 0 = 4$

Sum of the digits at even places = $5 + 1 + 9 = 15$

Difference = $15 - 4 = 11$

Question 5:

Write the smallest digit and the greatest digit in the blank space of each of the following numbers so that the number formed is divisible by 3:

(a) ___6724 (b) 4765 ___2

ANSWER:

(a) _6724

Sum of the remaining digits = 19

To make the number divisible by 3, the sum of its digits should be divisible by 3.

The smallest multiple of 3 which comes after 19 is 21.

Therefore, smallest number = $21 - 19 = 2$

Now, $2 + 3 + 3 = 8$

However, $2 + 3 + 3 + 3 = 11$

If we put 8, then the sum of the digits will be 27 and as 27 is divisible by 3, the number will also be divisible by 3.

Therefore, the largest number is 8.

(b) 4765_2

Sum of the remaining digits = 24

To make the number divisible by 3, the sum of its digits should be divisible by 3. As 24 is already divisible by 3, the smallest number that can be placed here is 0.

Now, $0 + 3 = 3$

$3 + 3 = 6$

$3 + 3 + 3 = 9$

However, $3 + 3 + 3 + 3 = 12$

If we put 9, then the sum of the digits will be 33 and as 33 is divisible by 3, the number will also be divisible by 3.

Question 6:

Write a digit in the blank space of each of the following numbers so that the number formed is divisible by 11:

(a) 92 ___ 389 (b) 8 ___ 9484

ANSWER:

(a) 92_389

Let a be placed in the blank.

Sum of the digits at odd places = $9 + 3 + 2 = 14$

Sum of the digits at even places = $8 + a + 9 = 17 + a$

Difference = $17 + a - 14 = 3 + a$

For a number to be divisible by 11, this difference should be zero or a multiple of 11.

If $3 + a = 0$, then

$$a = -3$$

However, it cannot be negative.

A closest multiple of 11, which is near to 3, has to be taken. It is 11 itself.

$$3 + a = 11$$

$$a = 8$$

Therefore, the required digit is 8.

(b) 8_9484

Let a be placed in the blank.

Sum of the digits at odd places = $4 + 4 + a = 8 + a$

Sum of the digits at even places = $8 + 9 + 8 = 25$

Difference = $25 - (8 + a)$

$$= 17 - a$$

For a number to be divisible by 11, this difference should be zero or a multiple of 11.

If $17 - a = 0$, then

$$a = 17$$

This is not possible.

A multiple of 11 has to be taken. Taking 11, we obtain

$$17 - a = 11$$

$$a = 6$$

Therefore, the required digit is 6.

Maximum weight = HCF (75, 69)

| | |
|----|----|
| 3 | 75 |
| 5 | 25 |
| 5 | 5 |
| | 1 |
| 3 | 69 |
| 23 | 23 |
| | 1 |

$$75 = 3 \times 5 \times 5$$

$$69 = 3 \times 23$$

$$\text{HCF} = 3$$

Hence, the maximum value of weight, which can measure the weight of the fertilizer exact number of times, is 3 kg.

ANSWER:

Step measure of 1st Boy = 63 cm

Step measure of 2nd Boy = 70 cm

Step measure of 3rd Boy = 77 cm

LCM of 63, 70, 77

$$\text{LCM} = 2 \times 3 \times 3 \times 5 \times 7 \times 11 = 6930$$

Hence, the minimum distance each should cover so that all can cover the distance in complete steps is 6930 cm.

Question 3:

The length, breadth and height of a room are 825 cm, 675 cm and 450 cm respectively. Find the longest tape which can measure the three dimensions of the room exactly.

ANSWER:

$$\text{Length} = 825 \text{ cm} = 3 \times 5 \times 5 \times 11$$

$$\text{Breadth} = 675 \text{ cm} = 3 \times 3 \times 3 \times 5 \times 5$$

$$\text{Height} = 450 \text{ cm} = 2 \times 3 \times 3 \times 5 \times 5$$

$$\text{Longest tape} = \text{HCF of } 825, 675, \text{ and } 450 = 3 \times 5 \times 5 = 75 \text{ cm}$$

Therefore, the longest tape is 75 cm.

Question 4:

Determine the smallest 3-digit number which is exactly divisible by 6, 8 and 12.

ANSWER:

Smallest number = LCM of 6, 8, 12

| | |
|---|----------|
| 2 | 6, 8, 12 |
| 2 | 3, 4, 6 |
| 2 | 3, 2, 3 |
| 3 | 3, 1, 3 |
| | 1, 1, 1 |

$$\text{LCM} = 2 \times 2 \times 2 \times 3 = 24$$

We have to find the smallest 3-digit multiple of 24.

It can be seen that $24 \times 4 = 96$ and $24 \times 5 = 120$.

Hence, the smallest 3-digit number which is exactly divisible by 6, 8, and 12 is 120.

Question 5:

Determine the greatest 3-digit number exactly divisible by 8, 10 and 12.

ANSWER:

LCM of 8, 10, and 12

| | |
|---|-----------|
| 2 | 8, 10, 12 |
| 2 | 4, 5, 6 |
| 2 | 2, 5, 3 |
| 3 | 1, 5, 3 |
| 5 | 1, 5, 1 |
| | 1,1,1 |

$$\text{LCM} = 2 \times 2 \times 2 \times 3 \times 5 = 120$$

We have to find the greatest 3-digit multiple of 120.

It can be seen that $120 \times 8 = 960$ and $120 \times 9 = 1080$.

Hence, the greatest 3-digit number exactly divisible by 8, 10, and 12 is 960.

| 2 | 48, 72, 108 |
| 2 | 24, 36, 54 |
| 2 | 12, 18, 27 |

| 3 | 3, 9, 27 |
| 3 | 1, 3, 9 |
| 3 | 1, 1, 3 |
| | 1, 1, 1 |

Question 7:

Three tankers contain 403 litres, 434 litres and 465 litres of diesel respectively. Find the maximum capacity of a container that can measure the diesel of the three containers exact number of times.

ANSWER:

Maximum capacity of the required tanker = HCF of 403, 434, 465

$$403 = 13 \times 31$$

$$434 = 2 \times 7 \times 31$$

$$465 = 3 \times 5 \times 31$$

$$\text{HCF} = 31$$

∴ A container of capacity 31 l can measure the diesel of 3 containers exact number of times

| | 1, 1, 1 |

$$\text{LCM} = 2 \times 2 \times 2 \times 2 \times 3 \times 3 = 288$$

We have to find the smallest 4-digit multiple of 288.

It can be observed that $288 \times 3 = 864$ and $288 \times 4 = 1152$.

Therefore, the smallest 4-digit number which is divisible by 18, 24, and 32 is

1152.
